

Autor: Dr. Fred Murphy; Sylvia Whitfield. Description: ?This negative-stained transmission electron microscopic (TEM) image revealed the presence of numerous herpes simplex virions, members of the Herpesviridae virus family. There are two strains of herpes simplex virus, HSV-1, which is responsible for cold sores, and HSV-2, which is responsible for genital herpes. At the core of its icosahedral proteinaceous capsid, HSV contains a double-stranded DNA linear genome.?. Content Providers(s): Centers for Disease Control and Prevention.
